

ABRAPLATA COMMENCES DRILLING AT ITS DIABLILLOS Ag-Au PROJECT IN ARGENTINA

Buenos Aires – June 22, 2017, - AbraPlata Resource Corp. TSX.V:ABRA ("AbraPlata" or the "Company") is pleased to announce that it has started a 2000m diamond drilling program on its Diablillos Ag-Au project in southern Salta Province of northwestern Argentina. The objective of the planned diamond drill program is to establish a resource within Fantasma Mineralized Zone with a view to further expanding the existing resources outlined at the Oculito Deposit, some 800m to the east of Fantasma. This will allow the Company to establish the parameters necessary for completing a Preliminary Economic Assessment study.

Diablillos lies at an elevation of 4100m above sea level, and covers an area of some 79km². The property hosts Ag-Au epithermal mineralization within a north-trending graben which traverses most of the property. This mineralization includes the Oculito deposit for which an indicated resource has been estimated consisting of 27.7m tonnes at 91.2g/t Ag and 0.85g/t Au and containing 81.3m oz Ag and 755k oz Au (135m oz AgEq or 1.9m oz AuEq). Reference is made to the Technical Report dated November 2, 2016 prepared by Roscoe Postle Associates Inc., a copy of which is filed under the Company's profile on SEDAR.

The Fantasma zone, which is the focus of the current drilling program, lies immediately to the west of Oculito, and has been identified by a number of trenches and four drill holes. The current program is expected to be completed by late July, and comprises 15 holes ranging from 100m to 350m in depth.

Mineralization at Fantasma outcrops at surface as indicated by the trenches, and appears to be confined to two gently dipping, stacked layers some 20m and 10m in thickness respectively. Previous drilling, notably hole DDH-12-126, intersected 24.1m @ 117.6g/t Ag in the upper zone and 11.7m @ 185.6g/t Ag in the lower zone. The Fantasma zone is most likely constrained by the graben bounding fault at its western limit and an intra-graben fault some 150m to the east; the zone would appear to be open to the south and possibly to the north although probably limited to where the intra-graben fault pinches out against the western boundary fault.

"The implication of establishing a resource within the Fantasma Mineralized Zone goes beyond merely expanding the global resource already identified at Diablillos" commented AbraPlata's Chairman Hernan Zaballa, adding that "A near surface resource at Fantasma could go a long way to mitigating the effects of a pre-strip that would be required in bringing the Oculito deposit into production".

About AbraPlata

AbraPlata is a junior mining exploration company focused on delivering shareholder returns by unlocking mineral value in Argentina. The Company's experienced management team has assembled an outstanding portfolio of gold, silver and copper exploration assets, and is focused on advancing its flagship Diablillos property through the various stages of feasibility. In addition, AbraPlata owns the highly prospective Cerro Amarillo property with its cluster of five mineralized Cu-(Mo-Au) porphyry intrusions located in a mining camp hosting the behemoth El Teniente, Los Bronces, and Los Pelambres porphyry Cu-Mo deposits. Further exploration work is also planned for the Company's Samenta porphyry Cu-Mo property south of First Quantum's TacaTaca project as well as its Aguas Perdidas Au-Ag epithermal property.
